

What should we do if we have to evacuate?

- Place moveable belongings on tables, beds and benches, with electrical items on top
- Gather up medicines, financial documents and personal items (including mementoes and photo albums) and take them with you
- If possible, check to see if your neighbours need help
- Listen to a local radio station for information
- Take three days' supply of clothes for each person
- Take your pets with you. AgricultureNSW will arrange for their care if necessary
- Turn off the electricity and gas
- Make your way to the evacuation centre: the SES will advise where this is
- Contact the SES on 132 500 if you need transport or other help
- When evacuating, avoid entering flood waters if possible. Driving and walking into floods are major causes of death during times of flooding

Keep this guide handy and refer to it when you hear a flood warning for the Macleay River

Where can I get more information?

The Kempsey Shire Local Flood Plan is available in all council libraries. It describes the arrangements that guide responses to flood emergencies in Kempsey.

The SES and Kempsey Shire Council can provide information on how to protect yourself and your property from floods.

FOR EMERGENCY HELP IN FLOODS
AND STORMS, CALL THE SES ON

Ambulance	000

Better FloodSafe than Sorry!

This brochure has been prepared for your protection by the State Emergency Service and Kempsey Shire Council.

FloodSafe in East and South Kempsey

What is the flood problem here?

- Unfortunately, low-lying parts of East and South Kempsey are built on a floodplain. Several streets are affected, with residential property beginning to be inundated in floods reaching about 6.0 metres on the Kempsey Traffic Bridge gauge
- In floods the size of the 1949 event, which reached a gauge height of 7.92 metres, about 120 blocks of residential land flooded. In some cases water will cover floors
- Higher and more severe floods than the 1949 one are possible
- The March 2001 flood peaked at about 7.0 metres at the Traffic Bridge gauge

The map shows the estimated extent of the 1% AEP flood. There is a 1% chance each year that Kempsey will experience a flood of this size. Such a flood will occur, on average, every 100 years.

How will we know when a flood is coming?

- Bureau of Meteorology flood warnings will be broadcast over ABC Mid North Coast, 2MC/ROX FM and TANK FM
- Listen to one of these stations for information. It is wise to have a battery powered radio and fresh batteries in case the power fails
- Flood warnings will give actual current heights at various upstream gauges and predicted heights at the Kempsey Traffic Bridge gauge. The SES will indicate the likely consequences at the predicted heights and advise appropriate actions

What can we do to be ready?

- Prepare a family or business flood plan. This plan should indicate which items need to be raised or relocated and what you will need to do if you have to evacuate. The SES can provide information to help you prepare your plan
- Put your plan where you can be sure to find it when a flood is approaching

The key to being ready is recognising the danger and knowing what you can do to manage it.

This includes realising that evacuation may be necessary in the more severe floods
